PT New bivalent binding molecule having binding affinity for ErbB ligand at
PT separate binding sites in a single covalently joined protein molecule,
PT useful for treating a disease or condition by removal or inhibition of an
PT ErbB ligand.
XX
PS Claim 10; SEQ ID NO 6; 37pp; English.
XX
CC The present invention relates to new bivalent ErbB-based ligand binding
CC molecules along with their method of preparation and use. The binding
CC molecule can be a protein expressed from a recombinant DNA molecule and
CC contain two extracellular domains of an ErbB receptor wherein both the
CC domains bind to ErbB receptor ligands. These binding molecules act as
CC traps to bind and sequester ligands, thus making them unavailable for
CC binding to cellular ErbB receptors. The bivalent binding molecules and
CC methods of the invention are useful for diagnosing and prognosing cancer
CC and treating a disease or condition that is improved, ameliorated or
CC inhibited by removal or inhibition of an ErbB ligand. The present
CC sequence is human erythroblastic leukemia viral oncogene homolog 3
CC tyrosine kinase receptor (ErbB3 tyrosine kinase receptor; HER3) receptor
CC ectodomain protein. Note: The sequence data for this patent did not form
CC part of the printed specification, but was obtained in electronic format
CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

PT   Identifying alternatively spliced exons, involves scoring each of several
PT   exon sequences derived from genes of species according to one or more
PT   sequence parameters.
XX
PS   Example 3; SEQ ID NO 97; 991pp; English.
XX
CC   The present invention relates to a novel method of identifying (M1)
```

```
CC   alternatively spliced exons. The method comprises scoring each of several
CC   exon sequences derived from genes of a species according to at least one
CC   sequence parameter, where the exon sequences of the several exon
CC   sequences scoring above a predetermined threshold represent alternatively
CC   spliced exons, thus identifying the alternatively spliced exons. Also
CC   claimed are: a system (S1) for generating a database of alternatively
CC   spliced exons; predicting (M2) expression products of a gene of interest
CC   and analyzing chromosomal location of each of the alternatively spliced
CC   exons with respect to coding sequence of the gene of interest to thus
CC   predict expression products of the gene of interest. (M1) is useful for
CC   identifying alternatively spliced exons. (S1) is useful for generating a
CC   database of alternatively spliced exons. The DNA and the protein
CC   sequences of the invention are useful for the diagnosis and/or treatment
CC   of the diseases like cancer, inflammatory disease, autoimmune disease,
CC   allergy and graft rejection. The present sequence represents a human
CC   ErbB3 receptor tyrosine kinase protein.

PT New soluble, human epidermal growth factor receptor-2 (HER2) splice
PT variant protein is HER2 antagonist, useful for the treatment of
PT proliferative diseases e.g. ovarian or breast cancer and pulmonary
PT fibrosis.
XX
PS Disclosure; SEQ ID NO 12; 86pp; English.
XX
CC The present invention relates to novel isolated soluble human epidermal
CC growth factor receptor 2 and 3 (HER2 and HER3) proteins with HER2 and
CC HER3 antagonist activity and anti-proliferative properties. The invention
CC further discloses (i) an isolated nucleic acid encoding HER2 but lacking
CC exon 15 of the normal HER2 transcript, with exon 14 joined directly to
CC exon 16, and containing a stop codon within exon 16, (ii) a splice-
CC switching compound comprising an oligonucleotide between 12-30 bases and
CC at least 12 contiguous bases complementary to an exon-15 or 14 acceptor
CC or donor splice site region contained within SEQ ID NO: 15 and (iii) a
CC method of treating a subject having ovarian or breast cancer
CC characterized by over expression of human epidermal growth factor
CC receptor-2 (HER2), which involves administering HER2 or the compound
CC comprising an oligonucleotide to the subject. The isolated soluble human
CC epidermal growth factor receptor-2 (HER2) protein of the invention is
CC useful treating a subject having ovarian or breast cancer characterized
CC by over expression of human epidermal growth factor receptor-2 (HER2),
CC and proliferative diseases such as cancer (lung, gastric and colon
CC cancer) and pulmonary fibrosis. The present sequence represents a human
CC Erbb3 tyrosine kinase receptor (delta15HER3) protein.

PT   New isolated polynucleotide and polypeptide markers, useful as diagnostic
PT   markers for diagnosing diseases, predicting response to treatment,
PT   monitoring treatment, or determining prognosis of a marker-detectable
PT   disease.
XX
PS   Example 5; SEQ ID NO 144; 421pp; English.
XX
CC   The invention describes an isolated polynucleotide comprising
CC   HUMA1ACM_PEA 2 _T21, HUMA1ACM_PEA 2 _T27, or HUMA1ACM_PEA 2 _T7
CC   comprising 1320, 1239, or 2713 bp (SEQ ID NO. 1, 2, or 3). Also described
CC   are: an isolated polypeptide selected from HUMA1ACM_PEA 2 _P36 (SEQ ID
CC   NO. 51), HUMA1ACM_PEA 2 _P49 (SEQ ID NO. 52), or HUMA1ACM_PEA 2 _P59 (SEQ
CC   ID NO. 53); an isolated polypeptide encoding for a head of: (a)
```

```
CC   HUMA1ACM_PEA 2 _P36 comprising a polypeptide 70% homologous to SEQ ID NO.
CC   180 or 182 of HUMA1ACM_PEA 2 _P36; (b) HUMA1ACM_PEA 2 _P49 comprising a
CC   polypeptide 70% homologous to SEQ ID NO. 182 of HUMA1ACM_PEA 2 _P49; or
CC   (c) HUMA1ACM_PEA 2 _P59 comprising a polypeptide 70% homologous to SEQ ID
CC   NO. 182 of HUMA1ACM_PEA 2 _P59; an isolated polypeptide encoding for a
CC   tail of: (a) HUMA1ACM_PEA 2 _P36 comprising a polypeptide 70% homologous
CC   to SEQ ID NO. 181 in HUMA1ACM_PEA 2 _P36; (b) HUMA1ACM_PEA 2 _P49
CC   comprising a polypeptide 70% homologous to SEQ ID NO. 183 in HUMA1ACM_PEA
CC   2 _P49; or (c) HUMA1ACM_PEA 2 _P59 comprising a polypeptide 70%
CC   homologous to SEQ ID NO. 185 or 208 in HUMA1ACM_PEA 2 _P59; a primer pair
CC   comprising a pair of isolated oligonucleotides capable of amplifying the
CC   amplicon; an antibody capable of specifically binding to an epitope of
CC   the amino acid sequence; a kit for detecting a marker-detectable disease
CC   comprising a kit detecting specific expression of a splice variant; a
CC   biomarker capable of detecting marker-detectable disease comprising the
CC   nucleic acid sequences or amino acid sequence, or its fragments. The
CC   polynucleotides and polypeptides are useful as diagnostic markers for
CC   diagnosing and screening for diseases diseases e.g., cancer, selecting a
CC   therapy for a marker-detectable disease and determining prognosis of a
CC   marker-detectable disease, as well as for predicting response to
CC   treatment and monitoring treatment. This sequence represents a
CC   HUMEGFRBB3_PEA_1_P53 polypeptide, a transcript from the HUMEGFRBB3
CC   cluster and variant of protein-tyrosine kinase erbB-3 precursor useful as
CC   a diagnostic marker.

PT   New compound that comprises an independently folding protein domain fused
PT   to a second independently folding protein domain by non-peptide bond for
PT   treating e.g. cancer, metastatic disease, asthma, rheumatoid arthritis
PT   and autoimmune disease.
XX
PS   Example 9; SEQ ID NO 193; 363pp; English.
XX
CC   The present invention relates to a novel compound comprising an
CC   independently folding protein domain fused to a second independently
CC   folding protein domain by a non-peptide bond around which dihedral
CC   rotation may occur. The invention, in particular, relates to hybrid
CC   immunoglobulins containing moving parts, related compositions, methods of
CC   use, methods of production of such hybrid immunoglobulins; and to
CC   analogous genetic devices, preferably nanodevices. The protein-like
CC   compounds (preferably immunoglobulins) and their dimers and multimers are
CC   useful for affecting the activity of a target, e.g. epidermal growth
CC   factor (EGF) receptor, human epidermal growth factor receptor 2 (HER2),
CC   vascular endothelial growth factor (VEGF) receptor (e.g. VEGFR1, VEGFR6,
CC   and VEGFR3), CD20 antigen, CD11a leukocyte receptor, IgE immunoglobulin,
CC   glycoprotein IIa receptor, glycoprotein IIIa receptor, tumor necrosis
CC   factor (TNF) alpha (e.g. TNFRSF1a, and TNFRSF1b), or TNF receptor, gap
CC   protein 120 (gp120), human Erb1 (proto-oncogene), Erb2, Erb6, Erb3 and
CC   Erb4; useful for treating e.g. cancer, metastatic disease, B-cell non-
CC   Hodgkin's lymphoma, asthma, a subject having a skin test positive for
CC   perennial aerocollagen, rheumatoid arthritis, psoriatic arthritis,
CC   ankylosing spondylitis, Crohn's disease, fustulizing disease, metastatic
CC   colorectal carcinoma, as an adjunct to percutaneous coronary
CC   intervention, and autoimmune diseases. The present sequence represents a
CC   fusion protein comprising the human Erbb3 tyrosine kinase receptor fused
CC   with the human intein polypeptide which was useful during the method of
CC   the invention for the production of hybrid immunoglobulins.

PT New compound that comprises an independently folding protein domain fused
PT to a second independently folding protein domain by non-peptide bond for
PT treating e.g. cancer, metastatic disease, asthma, rheumatoid arthritis
PT and autoimmune disease.

XX

PS Example 9; SEQ ID NO 194; 363pp; English.

XX

CC The present invention relates to a novel compound comprising an
CC independently folding protein domain fused to a second independently
CC folding protein domain by a non-peptide bond around which dihedral
CC rotation may occur. The invention, in particular, relates to hybrid
CC immunoglobulins containing moving parts, related compositions, methods of
CC use, methods of production of such hybrid immunoglobulins; and to
CC analogous genetic devices, preferably nanodevices. The protein-like
CC compounds (preferably immunoglobulins) and their dimers and multimers are
CC useful for affecting the activity of a target, e.g. epidermal growth
CC factor (EGF) receptor, human epidermal growth factor receptor 2 (HER2),

```
CC   vascular endothelial growth factor (VEGF) receptor (e.g. VEGFR1, VEGFR6,
CC   and VEGFR3), CD20 antigen, CD11a leukocyte receptor, IgE immunoglobulin,
CC   glycoprotein IIa receptor, glycoprotein IIIa receptor, tumor necrosis
CC   factor (TNF) alpha (e.g. TNFRSF1a, and TNFRSF1b), or TNF receptor, gap
CC   protein 120 (gp120), human Erbl (proto-oncogene), Erb2, Erb6, Erb3 and
CC   Erb4; useful for treating e.g. cancer, metastatic disease, B-cell non-
CC   Hodgkin's lymphoma, asthma, a subject having a skin test positive for
CC   perennial aerocollagen, rheumatoid arthritis, psoriatic arthritis,
CC   ankylosing spondylitis, Crohn's disease, fustulizing disease, metastatic
CC   colorectal carcinoma, as an adjunct to percutaneous coronary
CC   intervention, and autoimmune diseases. The present sequence represents a
CC   fusion protein comprising the human Erbb3 tyrosine kinase receptor fused
CC   with the human intein polypeptide which was useful during the method of
CC   the invention for the production of hybrid immunoglobulins.

PT Use of an ErbB-3 protein, a nucleic acid encoding an ErbB-3 protein or
PT their fragments, for treating, preventing or delaying neoplasms (e.g.
PT urethra, uterus, vagina or vulva neoplasm) or cancers (e.g. breast, ovary
PT or colon cancer).
XX
PS Claim 22; SEQ ID NO 2; 68pp; English.
XX
CC The present invention describes a method for treating, preventing or
CC delaying neoplasm in a mammal. The method comprises administering an ErbB
CC -3 protein, a nucleic acid encoding an ErbB-3 protein, or their
CC functional fragments, where an immune response is generated against the
CC neoplasm. ErbB-3 has cytostatic activity, and can be used in gene
CC therapy. The method is useful for treating, preventing or delaying
CC neoplasms (e.g. adrenal gland, anus, auditory nerve, bile ducts, bladder,
CC bone, brain, breast, buccal, central nervous system, cervix, colon, ear,
CC endometrium, oesophagus, eye, eyelids, fallopian tube, gastrointestinal
CC tract, head and neck, heart, kidney, larynx, liver, lung, mandible,
CC mandibular condyle, maxilla, mouth, nasopharynx, nose, oral cavity,
CC ovary, pancreas, parotid gland, penis, pinna, pituitary, prostate gland,
CC rectum, retina, salivary glands, skin, small intestine, spinal cord,
CC stomach, testes, thyroid, tonsil, urethra, uterus, vagina,
CC vestibulocochlear nerve, or vulva neoplasm), or cancers (breast, ovary,
CC stomach, prostate, colon and lung cancer). The present sequence
CC represents a human ErbB-3 amino acid sequence, which is used in the
CC exemplification of the present invention.

PT New isolated polynucleotide and polypeptide markers, useful as diagnostic
PT markers for diagnosing diseases, predicting response to treatment,
PT monitoring treatment, or determining prognosis of a marker-detectable
PT disease.
XX
PS Example 5; SEQ ID NO 139; 421pp; English.
XX
CC The invention describes an isolated polynucleotide comprising
CC HUMA1ACM_PEA 2 _T21, HUMA1ACM_PEA 2 _T27, or HUMA1ACM_PEA 2 _T7
CC comprising 1320, 1239, or 2713 bp (SEQ ID NO. 1, 2, or 3). Also described
CC are: an isolated polypeptide selected from HUMA1ACM_PEA 2 _P36 (SEQ ID
CC NO. 51), HUMA1ACM_PEA 2 _P49 (SEQ ID NO. 52), or HUMA1ACM_PEA 2 _P59 (SEQ
CC ID NO. 53); an isolated polypeptide encoding for a head of: (a)
CC HUMA1ACM_PEA 2 _P36 comprising a polypeptide 70% homologous to SEQ ID NO.
CC 180 or 182 of HUMA1ACM_PEA 2 _P36; (b) HUMA1ACM_PEA 2 _P49 comprising a
CC polypeptide 70% homologous to SEQ ID NO. 182 of HUMA1ACM_PEA 2 _P49; or
CC (c) HUMA1ACM_PEA 2 _P59 comprising a polypeptide 70% homologous to SEQ ID
CC NO. 182 of HUMA1ACM_PEA 2 _P59; an isolated polypeptide encoding for a
CC tail of: (a) HUMA1ACM_PEA 2 _P36 comprising a polypeptide 70% homologous
CC to SEQ ID NO. 181 in HUMA1ACM_PEA 2 _P36; (b) HUMA1ACM_PEA 2 _P49
CC comprising a polypeptide 70% homologous to SEQ ID NO. 183 in HUMA1ACM_PEA
CC 2 _P49; or (c) HUMA1ACM_PEA 2 _P59 comprising a polypeptide 70%

CC homologous to SEQ ID NO. 185 or 208 in HUMA1ACM_PEA 2 _P59; a primer pair
CC comprising a pair of isolated oligonucleotides capable of amplifying the
CC amplicon; an antibody capable of specifically binding to an epitope of
CC the amino acid sequence; a kit for detecting a marker-detectable disease
CC comprising a kit detecting specific expression of a splice variant; a
CC biomarker capable of detecting marker-detectable disease comprising the
CC nucleic acid sequences or amino acid sequence, or its fragments. The
CC polynucleotides and polypeptides are useful as diagnostic markers for
CC diagnosing and screening for diseases diseases e.g., cancer, selecting a
CC therapy for a marker-detectable disease and determining prognosis of a
CC marker-detectable disease, as well as for predicting response to
CC treatment and monitoring treatment. This sequence represents a
CC HUMEGFRBB3_PEA_1_P31 polypeptide, a transcript from the HUMEGFRBB3
CC cluster and variant of protein-tyrosine kinase erbB-3 precursor useful as
CC a diagnostic marker.
